

# SPRING 1 2025

In Mastering Number, we have started "Going for Gold." We have had great fun each day practicing our times tables!

In our writing, we looked at 'The Tear Thief'. She left her magic jar of tears in our classroom, and we all thought about what feelings those tears could have collected.

During our Maths lesson we have been explored how we can represent different groups to create fact families.

We then discovered if one factor of a multiplication calculation is even, the product will always be even!

In science, we have enjoyed exploring circuits. We performed tests, and made observations using different components. We also discussed how electricity is used in everyday life, helping us to make predictions for the future.

In Design and Technology, we have explored and evaluated levers and linkages. We have designed and created our own moving mechanisms.
